SUMMARY

CS undergraduate at Sukkur IBA University (CGPA 3.74) with a track record of shipping real work — two live websites deployed for an educational organization, a completed remote internship, and an ML platform built on real LinkedIn job market data. I work across the frontend-to-data stack: React, Python, WordPress, and Scikit-learn. I pick things up fast, work well independently, and I do my best work when the problem is real and the deadline is not hypothetical.

SKILLS

Frontend: JavaScript | HTML | CSS | React JS

Backend & Databases: MySQL | Python | Java | MongoDB

Machine Learning: Web Scraping | Scikit-learn | Pandas | Data Analysis | Predictive Modelling

Tools: WordPress | Git & GitHub

EXPERIENCE

WordPress Developer | Sindh Educational Organization

Sept 2024 - Present

- Developed and launched 2 content-driven blog websites from scratch, handling full project lifecycle from design to deployment
- Customized themes and plugins to improve performance and extend functionality, cutting average page load time noticeably
- Implemented on-page SEO structure (headings, metadata, sitemaps, mobile responsiveness), growing organic site visibility
- Managed publishing workflows and ongoing site maintenance for a consistent content pipeline

Web Development Intern | Prodigy InfoTech

Jul 2024 - Aug 2024

- Built responsive landing pages and interactive web apps using HTML, CSS, and vanilla JavaScript
- Developed and integrated reusable UI components, improving code consistency across projects
- Collaborated with a remote team using Git for version control and code review workflows

Active Member | Computer Science Society SIBAU

Oct 2025 - Present

Assisted in workshops, seminars and event planning for students on trending computer science topics.

EDUCATION

Sukkur IBA University

Bachelor of Computer Science,

Aug 2024 - April 2028

- CGPA 3.74

PROJECTS

Raabta – Real-Time Chat Application

Developed the frontend interface using React for a Java WebSocket-based chat system. Designed responsive UI components and handled client-side message rendering and interaction logic. Collaborated with backend team to integrate real-time communication.

- Technologies Used:** React.js, JavaScript, HTML, CSS, Bootstrap
- Github:** <https://github.com/mrshaikhmuhammad/raabta>

IoT Assistive Jacket — Microsoft Imagine Cup Project

Contributed to system integration and frontend interaction logic for an assistive IoT solution. Supported UI flow and testing for Azure-based object detection pipeline implemented by team members.

- **Technologies Used:** Azure AI Services
- **Github:** <https://github.com/mrshaikhmuhammad/IRIS-Jacket>

Java-based Ecommerce Desktop Application - Hackathon | Tech Club SIBAU

Designed backend logic and database schema for a Java-based e-commerce desktop application, implementing CRUD operations and database connectivity using JDBC.

- **Technologies Used:** Java Swing, JDBC, MySQL
- **Github:** <https://github.com/mahmarani/SSM-store>

AI Industry Analyzer | Machine Learning-Based Career Insights Platform

Developed a machine learning-based analytics system that scraped and analyzed LinkedIn job and career trend data to identify industry demands, popular departments, and career paths. Implemented predictive analysis to forecast job market trends and skill demand using data-driven insights..

- **Technologies Used:** Python, Machine Learning, Web Scraping, Pandas, Scikit-learn, LinkedIn Data Analysis
- **Github:** https://github.com/shahzebalipirzada/Industry_Analytics
